

1st PEMNet National Extension Conference 2026

ABSTRACT TEMPLATE

Theme: **HEIs at the Forefront of Transformative Extension: Advancing Evidence-Based, Inclusive, Sustainable, and Resilient Community Development**

Instructions: Complete all sections. Select only one paper category and one thematic area. Use clear, evidence-based statements and avoid unsupported outcome or impact claims.

A. Paper Information

1. Title of the Extension Project Paper	Advanced ICT Training and Sustainable Integration for DepEd Teachers - Phase III
2. Author/s and Institutional Affiliation/s Note: Use an asterisk (*) after the name of the project leader. If the presenter is not the project leader, write "paper presenter" after the name	Florlyn Mae C. Remegio*/Sultan Kudarat State University; Alex N. Remegio, Jr./Sultan Kudarat State University
3. Name and Email Address of Corresponding Author	ALEX N. REMEGIO alexremegio@sksu.edu.ph
3. Paper Category	☐ Completed Extension Project Paper ☒ Ongoing Extension Project Paper
4. Thematic Area (choose 1 only)	☐ Food Production, Agriculture, Fisheries, and Natural Resource Systems ☐ Health, Nutrition, Wellness, and Community Care ☒ Education, Literacy, Skills Development, and Lifelong Learning ☐ Livelihood, Entrepreneurship, Cooperatives, MSMEs, and Local Economic Development ☐ Environment, Climate Action, Disaster Risk Reduction, and Community Resilience

B. Extended Abstract Narrative

Guide: Write concise paragraphs under each required component.

5. Community or Sectoral Need Addressed

Briefly describe in not more than 150 words the validated community, institutional, or sectoral need addressed by the project.

Phase III builds on capability needs documented in the preceding extension phase, where non-ICT teachers prioritized AI for Education (40%) and cybersecurity (35%), while ICT/programming teachers prioritized advanced programming (45%) and IoT integration (35%). Building on these needs and the capability gains of earlier interventions, the Phase III status report identifies continuing requirements for more advanced and sustainable competencies in cybersecurity, Internet of Things, responsible AI, data analytics, digital pedagogy, academic integrity, and other emerging technologies. The project therefore addresses the progression from foundational digital literacy and applied ICT integration toward industry-aligned competencies, while responding to the need for sustained knowledge transfer and documented classroom or institutional application among partner-school beneficiaries.

6. Project Objectives

State the main objective/s of the extension project.

The project aims to: (1) enhance the advanced digital competencies of DepEd teachers in priority ICT domains and facilitate progression toward relevant certification pathways; (2) establish a sustainable master-trainer and mentoring mechanism that enables local knowledge transfer and cascading within partner schools; (3) improve continuing access to reusable e-learning, IEC, and certification-support resources for professional development; and (4) institutionalize and strengthen partnerships that sustain capability-building, knowledge-sharing, research collaboration, and technology transfer.

7. Extension Methods, Strategies, or Activities Implemented

Describe in not more than 300 words the major extension approaches, methods, strategies, or activities implemented.

Implemented as a multi-year extension project from January 2026 to December 2028, Phase III uses a partnership-driven and evidence-oriented capability-building approach. Implementation combines expert lectures, hands-on and hybrid learning, technical demonstrations, guided outputs, post-activity assessment, client-satisfaction evaluation, mentoring, and follow-up monitoring. Major 2026 activities documented in the status report include the July 28 Future-Ready Digital Innovations program covering cloud privacy, cybersecurity, Internet of Things, and responsible AI, followed by the August 13-14 Digital Transformation and Emerging Technologies Summit. International, academic, industry, and DepEd partners are engaged through MOA/MOU-based activities, technical sharing, research and technology-transfer linkages, and beneficiary coordination. Project documentation includes activity designs, attendance/registration records, evaluation results, photographs/screenshots, certificates, partner records, and an MOA-to-activity evidence trail. Planned 60-90 day follow-up monitoring will document mentoring, cascading, and classroom or institutional application.

8. Key Outputs, Emerging Results, and Evidence of Outcomes, Adoption, or Utilization

Briefly present in not more than 300 words the documented outputs and emerging results of the project. Include available evidence of outcomes, adoption, utilization, capability-building, institutional change, or public value, if applicable. Claims must be supported by verifiable evidence.

a. Major Outputs or Emerging Results

By August 2026, Phase III had implemented major international and partnership-based capability-building activities, including the Future-Ready Digital Innovations program and the Digital Transformation and Emerging Technologies Summit. The July 28 activity recorded 157 participant entries, 52 valid post-evaluation responses, a mean post-test score of 4.65/5.00 (93.08%), and composite client satisfaction of 4.68/5.00. The partnership matrix documents seven active partner implementation relationships supported by an official progress-report count of six MOA/MOU instruments, with final agreement-to-partner mapping undergoing documentation consolidation. E-learning/IEC/certification resources, copyright/IP outputs, publication targets, and policy/adoption outputs remain ongoing or for consolidation.

b. Evidence of Outcomes, Adoption, or Utilization

Current evidence supports early capability-building and partnership operationalization rather than long-term impact. The July 28 post-test and client-satisfaction results document favorable immediate post-activity knowledge performance and participant response, while international lectures, technical sharing, mentoring arrangements, and partner-specific activities provide implementation evidence. The report explicitly notes that an earlier 3.00/5.00 pre-test figure was not independently validated as a matched baseline; therefore, no percentage learning-gain claim is made. The status report further identifies the need for deduplicated participation records, centralized partner evidence, mentoring documentation, and 60-90 day follow-up on classroom or institutional adoption and cascading. Long-term adoption, utilization, and impact are still being assessed.

c. Supporting Documents/Evidence Available

Approved project and Notice to Proceed; Special Order and project-team certification; activity designs and programs; attendance/registration records; validated post-test and client-satisfaction results; photographs/screenshots and certificates; MOAs/MOUs and partner implementation records; and project status and monitoring reports.

9. Sustainability Direction or Next Steps

Explain in not more than 150 words how the project will be sustained, institutionalized, scaled, or improved, or state the next steps for ongoing projects.

Sustainability is being built into the remaining January 2026-December 2028 implementation through master-trainer development, mentoring, certification pathways, reusable IEC/e-learning resources, continuing MOA/MOU operationalization, and planned 60-90 day adoption monitoring. Next steps include consolidating and protecting learning resources, completing partner-specific evidence, documenting classroom or institutional application and cascading, advancing research presentation/publication and policy outputs, and continuing partner activities through the end of the approved project period. These mechanisms are intended to shift Phase III from activity delivery toward sustained local capability and institutional integration while ensuring that subsequent claims of adoption and impact are supported by verified follow-up evidence.

C. Keywords

10. Keywords, three to five keywords: teacher professional development; digital capacity-building; responsible AI; ICT integration; partnership-driven extension
